

Mars 360, a world religion backed by science and religion. Who can make war with it?

Anthony of Boston  
April 5th 2024

In ancient Greece and Rome, it was believed that the planets influenced people's affairs. This paper revives this paradigm. Here we can see that the content presented in this paper can promote a revival of the Roman Empire through the Mars 360 system. Since the Romans believed that the planets influenced human affairs, this paper quantifies this belief through observation and statistical evidence and sets the stage for one world religion and governing system. Let examine the process that justifies a belief in Mars influence, starting with the first scientific inquiry all the way unto the latest.

The Mars Effect, first introduced by French researcher Michel Gauquelin in 1955, is a thesis that provides statistical evidence supporting a connection between the position of the planet Mars and the eminence of sports champions. The evidence showed that there was statistical significance for Mars appearing in key areas of the astrological charts of major sports champions. Gauquelin divided the chart into 12 sectors and, in his research of astrological charts for thousands of elite athletes, discovered that Mars was positioned in the key sectors called the rising sector and the culminating sector with greater than chance probability. The base rate for a planet to appear in 2 out of 12 sectors, based on chance, was 17%. In Gauquelin's extensive data samples, Mars appeared with a frequency of 22%, which is more than coincidence and thus - putting aside all other possible meanings - means that Mars must have some effect.

Professor Suitbert Ertel came along in the 1980s and developed a criterion for calculating eminence by counting the number of citations of a particular athlete in sports reference books. The greater the number of citations, the greater the eminence. In his test, using Gauquelin's collection along with his own eminence criteria, he found that the Mars effect played a stronger role among athletes with higher citation counts, confirming Gauquelin's hypothesis that Mars appears more frequently in key sectors on the charts of major sports champions. The significance of Gauquelin's work is that it was the first time that astrology had ever been given scientific consideration. The work of Gauquelin and Ertel is the spark strong enough to justify belief in the influence of Mars and provides a strong foundation for the formation of a new religious system based on science and empirical data.

After Gauquelin and Ertel linked the influence of Mars to a scientific potential, I took Mars and linked it to a religious meaning. Using English Sumerian gematria, in which the letters of the alphabet are numbered in multiples of 6...A=6, B=12, C=18, etc., I added up the letters of Mars and got 306. After simply adding 360 to 306, I came up with 666 and tied Satan to Mars influence. Keep in mind that, in Jewish Talmudic tradition, Samael is the king of demons and an archenemy of Israel and is ruled by Mars. I have confirmed this with my thesis regarding 666 being tied to Mars influence and rocket/terror attacks against the state of Israel.

Mars 360/Satan is the revolution of Mars around the Sun and its influence on humanity. I found that Mars' position within 30 degrees of the lunar node coincided with the escalation of rocket fire from Gaza into Israel since 2007 (actually 2006). I discovered this in 2019. After discovering this, I was able to prove this was the case in real time. In my research, the statistics show that Mars makes a complete transit within 30 degrees of the lunar node over a period of about 3.5 months each calendar year. The base rate for predicting that something will happen within a three-month period within a calendar year is around 30.0%. Essentially, anyone who randomly picks 3.5 months within a calendar year has about a 30% chance of predicting the time frame in which the largest rocket fire from Gaza into Israel would occur. According to the actual data, 11,554 rockets were fired from Gaza from 2007 to 2022. During this period, in 11/16 years between 2007 and 2022, most rockets fired from Gaza in each of those years were fired while Mars was within 30 degrees of the lunar node. Based on the hypothesis that significantly more rockets are launched when Mars is within 30 degrees of the lunar node in a calendar year, coupled with the base rate, we can conclude that since 2007, the cases in which significantly more rocket launches in the period of about 3.5 months during which Mars makes a complete transit within 30 degrees of the lunar node in a calendar year, is in fact occurring at a rate greater than chance. In this case, a rate of 69%. Therefore, if someone randomly chooses a period of 3.5 months within a calendar year as the time of escalated rocket fire from Gaza into Israel, the probability of it

being accurate is 30%. Anyone who predicts a time frame of 3.5 months within a calendar year, coinciding with Mars being within 30 degrees of the lunar node, as the time of escalated rocket fire from Gaza into Israel, has about a 70% chance of being accurate . From 2019 to 2023 I achieved 100% accuracy, predicting Gaza rocket fire into Israel.

After providing the statistical data publicly, I went on YouTube and predicted in advance for the years 2019, 2020, 2022 and 2023, the rocket fire escalation periods for all four years (2020, 2021, 2022 and 2023). One after the other would be predicted by observing Mars within of 30 degrees from the lunar node. The fourth year of accuracy was most ominous, when I predicted the October 7th Hamas rocket attack in real time and compelling more people to believe in the influence of Mars. The fact that I demonstrated in real time had an impact. However, many were still skeptical.

This paper demonstrates the correlations between Mars/lunar node and Gaza rocket fire.

[Evidence concerning the exact day that Hamas and Islamic Jihad are choosing to launch their most significant attacks against Israel](#)

I then linked Mars to economic importance by showing how stock market crashes occur when Mars is within 30 degrees of the lunar node. Data from 1896 shows that the Dow Jones rose 857% in percentage terms between 1896 and April 2020. Since 1896, when Mars was within 30 degrees of the lunar node, the Dow Jones has risen 136%. Excluding the time Mars was within 30 degrees of the lunar node, the Dow Jones rose 721%. Mars retrograde phases during the time when Mars was within 30 degrees of the lunar node were not included in these data as "Mars within 30 degrees of the lunar node".

This paper links Mars/lunar node alignment to the major stock market crashes in history

[Apprehending Mars influence on Stock Market Crashes and Terror Attacks](#)

Since 2019 and building on the Mars Effect, I have been actively demonstrating that the controversial nature of Mars has an impact on a societal level, both in terms of geopolitics and the stock market. During Gauquelin's work on the Mars effect, there were numerous attempts to explain how Mars might exert a geological or biological influence on human behavior. Gauquelin suggested that the birth of the fetus was triggered by its response to planetary signals. Frank McGillion, author of *The Opening Eye*, explained this further by hypothesizing that the signals are sensed by the pineal gland. Jacques Halbronn and Serge Hutin, authors of *Histoire de l'astrologie*, later postulated that a person's beliefs are shaped genetically. In 1990, Percy Seymour, the author of *The Evidence of Science*, tried to explain that the signals emitted by planets are the result of the interaction between planetary tides and the magnetosphere. Peter Roberts assumed that the signals from planets are perceived by the human soul. German psychology professor Arno Müller argued that men born with prominent planets were the dominant men with the most reproductive rights. Ertel tried to find out whether there was a physical basis for the Mars effect. He tested Mars in relation to Earth and tested whether the distance between Earth and Mars would cause variations in the Mars effect. Angular size, declination, orbital position relative to the Sun, and geomagnetic activity on Earth were all ruled out by Ertel as anything that could physically explain the Mars effect. I explain the Mars phenomenon further by positing and demonstrating how Mars creates an effect when it is within 30 degrees of the lunar node. The essence of this alignment and hypothesis is essentially that the closer the planet Mars is to the intersection between the Moon and Earth's orbit, an effect is created that causes people to exhibit more pessimistic, cynical, and aggressive characteristics place. During this phase, stock market investors are negative about the market while militants become more aggressive compared to other times when Mars is not within 30 degrees of the lunar node. The basic premise that is easily justifiable is that if the moon is exerting a gravitational tug on the tides of the ocean, and that since humans are made up of mostly water, then it is thus rational to believe that the moon can have an effect on the human behavior. However, I infer that Mars must also exhibit a similar effect as the moon.

The lunar nodes are the intersecting points between the Moon's orbital plane around the Earth and the Earth's orbital plane around the Sun. Starting within 30 degrees of the lunar node, the closer Mars' orbit around the Sun gets to the intersection (lunar node) between the Moon's orbit around the Earth and the Earth's orbit around the Sun, the greater the influence of Mars on earthly events. The best

physical explanation I can give may have to be derived from the influence of the moon. I suggested that since the Moon has been confirmed to exert a gravitational pull on the Earth, such that the closer the Moon is to the Earth, the higher the ocean tides are, then the Moon must also influence people's moods because the human body consists mostly of water. Since this Mars explanation is based on its position in relation to the intersection between the Moon's orbital plane and the Earth's orbital plane, I assert that Mars could exert influence on humans in a similar manner.

I even added another element to this postulate in 2020, deriving it from an eschatological tradition in Islam regarding a demonic control of the weather revolving around Dajjal. I posited that Mars, as it is tied to Satan and 666, must also affect the weather. There is an academic paper entitled "Hypothesis that rainfall and droughts in Mashad, Iran/Khorasan can be predicted by observing the planet Mars. "

[https://www.academia.edu/91778788/Hypothesis\\_that\\_rainfall\\_and\\_droughts\\_in\\_Iran\\_can\\_be\\_predicted\\_by\\_observing\\_the\\_planet\\_Mars\\_taken\\_from\\_the\\_book\\_The\\_Mars\\_360\\_Religious\\_and\\_Social\\_System\\_Khorasan\\_edition](https://www.academia.edu/91778788/Hypothesis_that_rainfall_and_droughts_in_Iran_can_be_predicted_by_observing_the_planet_Mars_taken_from_the_book_The_Mars_360_Religious_and_Social_System_Khorasan_edition)

My postulates predates a recent scientific finding that Mars does in fact have an effect on Earth's climate.

Now in 2024, scientists are beginning to posit that Mars has an effect on Earth's climate and ocean tides, which literally confirms my thesis.

"The Moon causes both high and low tides, but it's not the only celestial body that impacts Earth's waters. Mars's gravity influences our planet's deep-ocean currents, according to a study reported in Nature Communications this week."

<https://www.science.org/content/article/mars-may-be-having-profound-impact-earth-s-deep-ocean-currents#:~:text=Every%202.4%20million%20years%2C%20Mars's,currents%20and%20makes%20them%20stronger.>

<https://www.newscientist.com/article/2421730-marss-gravitational-pull-may-be-strong-enough-to-stir-earths-oceans/>

Thanks to these findings, Mars 360 is now both the theological and scientific development of a world religion with empirical data. Who can make war with it or fight against it? The question is who will be the next Prophet of Mars? Gauquelin is something of an Abraham figure, martyred by skeptics. Ertel is Moses. I'm Elijah. And many more will come and inspire faith. At this point, especially now that science confirms that the planet Mars has an impact on earthly events, along with the empirical evidence from Gauquelin and Ebert and my demonstration of predicting rocket fire from Gaza, it becomes irrational not to believe in the influence of the planet Mars. This paper lays the foundation for promoting the faith needed to power a global government movement, a global religious movement called Mars 360, and a global monetary movement called Mars Redback, all in the name of a revitalized Roman Empire.

Keep in mind that Mars and its influence on Earth is extrapolated from 666. Mars 360 was calculated from 666 using English Sumerian gematria, so keep in mind all scientific findings related to Mars influences, especially as it converged toward what I have presented, is also a scientific justification of the Bible/Christianity and Islam, and Talmudic tradition because Mars 360 is the mark of the beast system and the Mars climate effect will enter the middle east through khorasan as predicted. The Talmudic tradition regarding Samael and his consignment to Mars is also regarded here. Religion and Science is converging under Mars 360.

The basis of the new religion, Mars 360, is that Mars's effect on human behavior inclines each individual toward certain predispositions that lend itself to fundamental outlooks which carries with it... a high degree of inflexibility. This inflexibility plays itself out in various political and social stances like socialism, pacifism, capitalism, liberalism, conservatism, libertarianism, etc, but is actually the result of Mars's permanent influence on the human brain. This gives rise to the idea that while certain

stances are different in external display, they are at the same time fundamentally backed by the same source(to varying degrees of course)....which is Mars.

This influence manifests differently amongst the human population. Mars influences some to be antagonistic to different groups, others to be antagonistic to different individuals. It influences some to be antagonistic to change and others to stagnancy. It's all laid out in 6 different categories and allows for a wider perspective of the human condition, thus opening the door to understanding and improvisation. This construct allows the individual to navigate through life accordingly, adjusting his own behavior to the situation he faces.... catering to the human archetypes in his space according to the Mars number they wear.

The earliest sources regarding my hypothesis about Mars and its influence can be found on Zenodo.org or the Archive.org

Here is the earliest online source about what I have been presenting since 2019. PDF is from November 10 2019
